

# POPULAR Computing WEEKLY

**35p** 5-11 May 1983 Vol 2 No 18

## This Week

**Win a Commodore 64**  
Write your own adventure game and you could win a Commodore 64, or a Vic20. For details of how to enter this new competition see the form on page 35.

**Dragon software**  
Brian Cadge looks at a range of games from Vulcan noughts and crosses to Death's Head Hole. See page 14.

**Race Electronics**  
David Kelly travels to South Wales to visit Race Electronics. See page 13.

**Dragon sound**  
Peter Chase unravels some of the mysteries of the Dragon's machine code sound routines on page 25.

**★ STAR**  
Space Panic  
on Spectrum.  
See page 10.  
**★ GAME ★**

## News Desk

## Commodore – new price deal

COMMODORE has reacted to the £50 drop in price of the 48K Sinclair Spectrum by revising its own home computer prices.

From June 1, Commodore will sell the Vic20 as part of a combination deal that will include the C2N dedicated cassette player and probably a Rom cartridge — all for a price which a spokesman suggested would be "certainly no more" than the present cost of the Vic machine, £139.

The deal is expected to be similar to that now being offered in the US where, since the beginning of April, the Vic20, cassette player and cartridge combination has been selling for £130.

Some US dealers have chosen to split up the package — selling the Vic20 for only £66. If the same happened here, the computer could sell for as little as £70.

Commodore's British deal is

Continued on page 5

## DK'Tronics in £150,000 record deal

DK'TRONICS has concluded a £150,000 software deal with K-Tel.

Under the terms of the agreement, which was announced at the Midland Computer Fair last week, DK'Tronics will supply K-Tel with 15 games including 3D Tanx and Dictator. Record distributor and wholesaler K-Tel will distribute the programs to record shops and retail outlets.

This deal, which is the first K-Tel has signed with a software company, is believed to be the largest single order for UK home micro software.

K-Tel, who plan to start a promotional campaign from June 1, hope to see five new games from DK'Tronics each month.

DK'Tronics, which is owned by David Heelas, employs 30 people and has been in existence for just two years. Turnover in the first year was £250,000, but turnover in the second year is estimated to have reached £3m.

## Computer Swap 01-930 3266

Free readers entries to buy or sell a computer.  
Ring 01-930 3266 and give us the details.

**ZX81**, 16K, fantastic card games: three-card brag, whist, pool, higher-lower, £3.25. Andrew Storey, 162 Orion Road, Carlisle, Cumbria CA2 7HD.

**TOWERS OF HANOI** cassette, listing for ZX Spectrum, £3 please to M. Lillens, 25 Longfield Road, Bristol BS7 9AG.

TEXAS

### How to submit articles

Articles which are submitted for publication  
 should not be more than 3,000 words long. The  
 articles, and any accompanying programs,  
 should be original. It is breaking the law of  
 copyright to copy programs out of other maga-  
 zines and submit them here — so please do not  
 be tempted.

All submissions should be typed and a double  
 space should be left between each line. Please  
 leave wide margins.

Programs should, whenever possible, be  
 computer printed.

We cannot guarantee to return every submit-  
 ted article or program, so please keep a copy. If  
 you want to have your program returned you  
 must include a stamped, addressed envelope.

### Accuracy

*Popular Computing Weekly* cannot accept any  
 responsibility for any errors in programs we  
 publish, although we will always try our best to  
 make sure programs work.

## Editorial

One surprising facet of the micro-  
 computer industry is the number of  
 people who are interested in both  
 micros and science fiction/fantasy.

Such luminaries as Mike Johnston,  
 organiser of the ZX Microfairs, Jeff  
 Minter of Llamasoft and Nick Lambert  
 of Quicksilver, have admitted to being  
 science fiction aficionados. Scott  
 Adams (he of *Adventureland* fame)  
 has a library of more than 3000 SF  
 titles. Dave Langford, a regular contri-  
 butor to *Computer and Video Games*,  
 has written a number of SF short  
 stories and novels.

Many micro games also have a  
 strong SF/fantasy element. *Space In-  
 vaders*, Artic's *Ship of Doom*, Mel-  
 bourne House's *The Hobbit* and Car-  
 nel's *Black Crystal* are just a few of the  
 current titles available.

Films such as *Tron*, *Star Wars* and  
*ET* have spawned a host of arcade  
 games which are starting to filter  
 through to the more popular micros.  
 SF novels such as *Fantastic Voyage*,  
*Starship Troopers* and *Dune* are also  
 providing a breeding ground for the  
 imaginations of many micro program-  
 mers.

It is not a coincidence that Bug-Byte  
 refers to its software as "A door into  
 another dimension".

No one is quite sure how strong the  
 correlation is between SF fan and  
 micro user, but there is no doubt that a  
 correlation exists.

## Next Thursday

Ian Logan reveals some of the myster-  
 ies hidden in the Spectrum's Draw  
 command while A Edwards explains  
 how to move a cursor over the Dragon's  
 hi-res graphics screen, without  
 destroying the picture underneath.

## GAMES THAT ARE HARD TO BEAT

Why? Because every single Romik game is professionally written in machine code to give you all the thrills and action of a fast-moving arcade game. Every one recorded on top quality tape, most of them playable either from the keyboard or with joysticks.

A lot of thought and development goes into every game – and we guarantee no bugs to drive you mad, no infuriating gaps to interrupt your fun.

Whether pitted against invaders from alien worlds, tracking hungry sharks or frantically stalling the melt-down of a nuclear reactor you can be sure that if it's a Romik game you'll have a battle on your hands. The kind of battle that leaves no room for mistakes or hesitation.

### COMING SOON

Romik promise at least one new game every month, and soon there'll be Romik games for the Atari, Spectrum and Lynx computers.

### FREE COMPETITIONS

Every action game purchased brings a free entry into the national competition to find the Supreme Champion, and free entry into the annual Romik Grand Master competition with its fantastic prizes.

### TOP PRICES PAID

We're always on the lookout for new, top quality machine code arcade games for any machine. If you have what you consider a marketable game, let us know. Nobody pays higher royalties than we do.

For further details of all our games and a list of stockists complete the coupon and send it to:

Romik Software, 272 Argyll Avenue, Slough SL1 4HE

## Price deal

Continued from page 1

to be accompanied by what it claims is the company's biggest-ever promotion with a budget exceeding £14m.

Following last week's announcement of Sinclair computer price reductions, Sinclair itself has now cut prices to the same level (see *Popular Computing Weekly*, April 28). The price of the ZX Printer also drops from £59.95 to £39.95.

● Acorn's Chris Curry sees these price moves as a reaction to the impending launch of his new £150 computer, the Electron.

"We quite expected the Sinclair prices to drop prior to the Electron's launch," he said. "The Spectrum cannot compete with the Electron's superior performance in the same price bracket."

The first appearance of the Electron is now expected very shortly — although it may not go on sale in the shops until the summer.

## National ZX Users Group closes

THE National ZX User's Club — founded by Tim Hartnell three years ago — has closed.

Its monthly magazine, *Interface*, is to cease publication and its last issue has now been sent to members.

Liz North, UK co-ordinator for the club, said: "We feel we have done our job now. When Tim started *Interface* there were no local user groups or specialist ZX magazines. But there comes a point when one must grow up — when other people are doing the job you have been doing."

Both of the specialist ZX magazines — *ZX Computing* and *Sinclair User* — were begun with help from Tim and the National ZX Users Group.

Those with memberships still to run are being offered either a full refund for the outstanding period, or discounted purchases from the range of books published by Interface Publications.

Interface Publications will continue to produce computer books and software and Tim Hartnell will continue to write and edit new titles.

At its peak, the group had over 10,000 members.

## Cyborg disc drive for home micros

A NEW low-cost 5¼-inch single disc system is being developed by a French company called Cyborg.

The system is designed to be compatible with over 25 microcomputers — including the ZX81, Spectrum, Oric and BBC machines. Connection to the different machines requires only a change of lead.

The system is capable of this because it incorporates its own 6500/12 processor as part of the disc operating system board. Consequently, the operating system software does not need to be compatible with the host machine.

ble with the host machine.

In the case of the ZX81 implementation, for example, the Exponential key is used as an entry to the software, instructing the disc system to download the necessary interfacing software — only 1K is used and this is afterwards returned to the user — giving access to the disc system's operating directory.

The Cyborg system uses a conventional 5¼-inch single-sided single-density disc drive with a formatted disc capacity of over 360K.

## Micro income tax guide

AN answer to all those taxing problems is provided by a new company called Microtax. It is offering a microcomputer program for completing tax returns which will run on most home micros.

The software package — available for the 48K Spectrum, 16K Vic20, Dragon 32, BBC Model B, Commodore 64 and 400 Series Pet — provides a step-by-step guide. The program leads the user through the 1982/3 tax return, explaining exactly what to fill in, advising on the most advantageous tax options and calculating the total tax liability for the year.

A version of the program for the 1983/4 tax year is planned for autumn 1983.

Microtax is available for £24.95 from: Microtax, Barratt House, 7 Chertsey Road, Woking, Surrey.

## Swiftlink

SWIFTLINK Software — the London-based BBC software house — has ceased trading.

According to the company's founder, Neil Munns, the decision to fold the company has been taken for "personal and financial reasons".

## Zeaker micro turns turtle

THE Zeaker Micro-Turtle is a two-wheeled mobile robot produced by Colne Robotics.

The Zeaker is controlled from a computer and comes with software which allows its movements to be memorised and reproduced.

A built-in retractable pen can be used to create Logo-type graphics. The unit costs £60 in kit form and £80 built (including VAT) and is designed to connect to the ZX81 and ZX Spectrum computers, as well as to any machine with an 8-bit bi-directional port.

Details from Colne Robotics, Beaufort Road, off Richmond Road, Twickenham, Middx.

The system also incorporates a unique software protection system with the *Secure* keyboard instruction making discs difficult to copy.

Cyborg's single disc drive is planned for the summer at a price of around £225, including VAT.

The company can be contacted at 22 Boulevard Saint Michel, 75006 Paris, France. (Tel: 01 033 1 329 62 37.)

## All change at Quicksilva

CHANGES are taking place in the Quicksilva stable.

Founders Nick Lambert and John Hollis are stepping down from the day-to-day running of the company — Rod Cousins has been appointed general manager.

"Quicksilva has now got to the stage where it is operating smoothly — developing, re-

Nick Lambert (left) and Rod Cousins

leasing and marketing new games," explained Nick Lambert.

"John Hollis and I will now be less involved with the everyday running of the company, leaving us time for other things."

Nick is understandably cagey about what plans he has, but they involve the setting-up of a new company. "We are going to carry on doing what we are good at — which is coming up with new ideas."

"The new company's activities are a development of Quicksilva's — and are software related," he said.

"Our first new project is really John's — he is working on the technical half," added Nick mysteriously.

"Obviously we will maintain our involvement with QS, but as the new company gets going more and more of our time will be spent on the new project."

● Quicksilva became a limited company in March 1982 and a turn-over in excess of £10m is expected this year.

## Oric's non-appearance

In *Popular Computing Weekly*, March 31, your News Desk section states "existing mail order customers who have ordered the 16K machine (Oric) have been sent 48K models on extended loan and they will apparently be replaced when the 16K unit becomes available".

I ordered a 16K Oric computer at the end of last year as a present for my son. Apart from an option to purchase a 48K version at an additional cost of £70, I have not received any other communication to date even though I wrote to Oric regarding this matter on March 12. My bank reported that my cheque for the purchase price of £105.90 was cashed on February 23.

I would be interested to know how many of your readers have had a similar experience to mine, and obliged if you would convey the contents of this letter to Oric as direct written communication does not seem to produce any response from them.

E W Jefferson  
3 Hinton Wood Avenue  
Highecliffe-on-Sea  
Dorset BH23 5AB

## The missing link

The Students 'T' program published in Vol 2 No 9 suffered from a gremlin and a terminological inexactitude. The gremlin caused the end of an equation to disappear in printing, despite the listing being correct on submission. To make it work add:

(R(1)+1)-2  
to the end of the published version of Line 950.

The other problem was less serious. It involved the routine used to estimate the probability that the calculated value of 't' could be exceeded by chance ( $F(Nchances)$ ). When the difference between the means was insignificant (when  $t < 1$ ) the routine as published exaggerated the insignificance. Either way you would have rejected any thoughts that you were dealing with a real difference, but the "% confident" figure printed out was too small.

A better estimate of this

figure will be obtained by following the alterations suggested below:

Line 410 becomes IF T < 45 THEN 438  
Line 530 becomes IF T < 45 THEN 550  
Line 540 becomes X = (1 - X) / (2 + 1)

Remember this only affects the response to situations when 't' is less than 1; ie, to situations when the difference between the means is insignificant.

Calvin Woodings  
12 Copewood Avenue  
Nuneaton  
Warwickshire CV11 4TQ

Our thanks go to Alan Mitchell of Ledbury, Herefordshire, for spotting the error and writing to request an improvement, and our apologies for missing off the end of line 950.

## Positive action

I have been following the correspondence in your magazine regarding software copyright and piracy and, in particular, software libraries. I would like to make the point that while I agree that large-scale software copying will in the long term be detrimental to the industry as a whole, surely the onus is on the manufacturers of commercial software to protect their programs from copying — a good example is Rabbit Software's *Nightcrawler* program for the Vic20.

Instead of moaning about how hard done by they are, these companies should be doing something positive to help themselves.

Andrew Buck  
8 Carey Park  
Helston  
Cornwall

## A delicate matter

I very rarely feel the need to express my views in print, but as I read *Popular Computing Weekly* with interest, I have been able to follow the Software Centre's Buy'n Try scheme dispute with Quicksilva. From what I can gather from the articles, Quicksilva is worried about the copying of its tapes before they are returned.

I am pleased to see both parties have reached an agreement out of court. But, reducing the buy-back period from six months to one month is surely encouraging the

copying of tapes.

After all, one month barely gives you time to achieve a high score! But, after six months you are most likely to be fed up with the game and not want to record it before returning it.

I would be interested in other people's views on this delicate matter of copyright.

James McKellar  
Chenies House  
Top Street  
North Wheatley  
Retford  
Nottinghamshire

## Memory saver...

I would like to comment on C Whitehead's letter (April 14) which 'corrects' the 'Board Game'. It wastes a lot of the memory that the letter tries to make us save.

Assuming that the Dragon 32 uses five bytes to store a number (I don't know, not owning a Dragon), and as an array of 75 numbers is dimensioned, 59 of which are not used, 295 bytes are wasted!

If you look carefully at the numbers in lines 570-630 and 640-740 you will see that C and D respectively are increased by 20 each time; ie, 25, 45, 65, 85, ...

Now a little thought can replace 20 lines and 9 in C Whitehead's letter with 4 lines:

```
550 AS = INKEY$
560 IF AS = "X" THEN 10
570 IF ASC(AS) > 48 AND ASC(AS) < 56 THEN C = (ASC(AS) - 49) * 20 + 25: F1 = 1
580 IF ASC(AS) > 64 AND ASC(AS) < 76 THEN D = (ASC(AS) - 65) * 20 + 25: F2 = 1
```

This approach removes 75 numbers of five bytes each, 375 bytes in all. In fact, because of all these bytes, C Whitehead's alteration probably uses more memory than the original.

Stephen Roberts  
100 St James Street  
Shaftesbury  
Dorset SP7 8HQ

## Dragon hater!

It is amazing discovery time for Sinclair ZX Spectrum owners! Before you groan, I can promise that it is not another bug. It is all to do with the Spectrum's ability to change the colour of its border.

The program below produces a flicker-free, striped border. Please notice there are no traces of machine-code:

```
1 PAPER 7: INK 0: BORDER 7:
CLS
2 PRINT AT 1,5;CHR$ 127;" 1983
  Andrew Wiseman"
5 PLOT 8,8: DRAW 230,8: DRAW
  0,150: DRAW -230,0: DRAW
  0,-150
10 BORDER 7
20 BORDER 1
30 BORDER 2
40 BORDER 3
50 BORDER 4
60 BORDER 5
70 BORDER 6
80 BORDER 7
90 BORDER 0
110 PAUSE 1
120 GO TO 10
```

When Run the border will have a black streak at the top and bottom of the screen with a white streak separating the colours down the sides of the screen from the black. The stripes are flicker-free (until you press a key) because of line 90. Using the method above, you can have from two to eight stripes on screen at one time, any more than that produces a shaky effect.

Am I the sole person in the world who loathes the Dragon 32? It costs so much and does so little! Why don't we blow up all the Dragons and re-issue owners with Atari 400s? This will result in no more Dragon manual bugs and no more letters about the speeding-up of its chip!

Andrew Wiseman  
68 Mayfield Road  
Hartford, Huntingdon  
Cambridgeshire PE18 7NJ

## More Ik's please

I am writing to you to complain. I think you should have more 1K ZX81 programs. I say this because there is nearly nothing in your magazine for this popular computer. Lots of people have ZX81s, but lots of them do not have the extra 16K Ram.

I am sorry to have to say this about your popular magazine, but maybe you should devote less space to the BBC model II micro and more to 1K computers. Thank you for your time — I hope you understand that a lot of users cannot buy any other add-ons for their system because of the cost.

played a major role in creating the  
ZX Spectrum), they abandoned it in  
favour of FORTH.

FORTH is just as easy to learn  
as BASIC. Yet it's a faster, more  
compact and more structured  
language that educationalists  
and professional programmers  
alike prefer.

So the Jupiter Ace is the only micro-  
computer you can buy that is designed around  
FORTH.

Using it, there's little fear of accidentally  
'crashing' programs halfway through and having  
to start all over again (a common fault with  
BASIC). The Jupiter Ace's comprehensive error  
checking sees to that.

The Jupiter Ace has a full-size keyboard,  
high resolution graphics, sound, floating point  
arithmetic, a fast, reliable cassette interface,  
3K of RAM and a full 12 month warranty.

You get all that for £89.95. Plus a mains  
adaptor, all the leads needed to connect most  
cassette recorders and TV's, a software  
catalogue (35 cassettes available, soon to be 50),  
the Jupiter Ace manual and a free demonstration  
cassette of 5 programs.

The Jupiter Ace manual is a complete  
introduction to personal computing and a  
simple-to-follow course in FORTH, from first  
principles to confident programming.

Plug-on 16K and 48K memory expansions  
are also available, at very competitive prices.  
(There'll be a plug-on printer interface available  
soon, too.)

It'll take you no time at all to realise how  
clever Richard and Steven were to design the  
Jupiter Ace around FORTH. And even less time to  
realise what a silly price £89.95 is to charge for it.

#### Technical Information Hardware

Z80A, 8K ROM, 3K RAM

#### Keyboard

40 moving keys; auto repeat; Caps Lock

#### Screen

Memory mapped 32 col x 24 line flicker-free  
display upper and lower case ascii characters

#### Graphics

High resolution 256 x 192 pixel user defined  
characters.

#### Sound

Internal loudspeaker may be programmed for  
entire audio spectrum.

#### Cassette

Programs and data in compact dictionary format  
may be saved, verified, loaded and merged. All  
tape files are named. Running at 1500 baud

#### Expansion Port

Contains D.C. power rails and full Z80 Address,  
data and control signals. Can connect extra  
memory peripherals

#### Editor

Allows complete editing and listing of compiled  
programs.

# Space panic

A new game for the 16K Spectrum by C Williams

This program, Space Panic, is written for ■ 16K ZX Spectrum. It is a version of the arcade game of the same name.

The object of the game is to dig holes and bury the four monsters who prowls the metal girders. To dig a hole simply press *Caps Shift* with *a* to dig to the left, or with *d* to dig to the right.

When a monster falls down a hole, you are awarded 100 points and the hole is filled with the dead body of the monster. When all the monsters are buried, a fanfare is played and a bonus is given — the amount of points depending on the time taken to clear the wall and the level of play.

Also, you only have ■ limited amount of oxygen which you use up more quickly as

the level of play increases. If it runs out, you suffocate and fall to the ground. A warning beep tells you when your oxygen tanks are nearly empty.

If you are caught by a monster, it pushes you off the girders and you fall to your death. At the fourth wall you are awarded an extra life. To make the program go faster, delete the *Beep* in line 521 and shorten the *For/Next* loops in lines 1020 ■

1060 and 1500 to 1540.

The user defined graphics are:

# Racing ahead in Wales

**David Kelly visits Race Electronics to see computers being manufactured**

Increasingly, computer companies both here and in the US, are beginning to look to the Far East to build their designs.

Atari, for example has recently decided to move most of its production to Taiwan. In this country, Acorn is keen to manufacture its new computer, the Electron, in Singapore.

One reason that home-grown computer companies are looking overseas to manufacture is that few British plants are equipped to compete with the automated production techniques of the Far East.

One company determined to compete with foreign plants on an equal footing is Race Electronics in South Wales. The company has installed the latest component insertion equipment and at present assembles printed-circuit boards for both the Dragon and BBC computers.

Race was formed in 1977 by its present managing director, Keith Arnold. Initially the company began by designing and manufacturing fruit-machines. The fruit-machines industry was one of the first to use the microcomputer seriously — few people realise quite how sophisticated they now are. They contain a computer which is substantially more powerful than the Dragon, for example, and some of the machines now being developed by Race will even incorporate computer/video disc player combinations.

In 1981 Keith Arnold visited Japan to learn about automated production techniques. "I realised that that was the future for the company and that a significant expansion was needed," he said. So Race was incorporated into the Ace Gaming Machines Group and the move enabled the company to spend £1/2m investing in automated assembly equipment and expertise.

## Involved with Dragon

"After the introduction of that equipment we managed to win the contract for the BBC machine assembly in May last year, and shortly after that we negotiated the Dragon contract," says Keith.

Chris Lare, Race's technical design manager, was involved in sorting out the Dragon's production: "We were involved in the Dragon at a very early stage at a time when there were only six or eight circuits around — the ones built up by the Pats Centre in Cambridge.

"We got the final pre-production models late last June — and from then on we began to gear up for automatic assembly — essential for a product like the Dragon."

The first machine Race installed was an Amistar chip inserter — costing around £20,000 — over two years ago. The company now has two of these machines

and has installed two more machines, priced at over £100,000 each, to insert resistors and capacitors.

All the machines work in roughly the same manner. The printed-circuit board is clamped very accurately — to within several thousandths of an inch — into a specially designed jig. The machine then aligns the jig underneath the component inserter, fed with chips from a tube or discrete components from a conveyor belt. The component is pushed through the board, bent and the wires trimmed. In one action. Then the jig is rotated to the position for the next component.

The route that the insertion equipment takes across the board is determined by the program in the machine's central computer — and components are inserted in strict order, depending on their height and the size of the jaws needed to grip them.

## Checks each component

Of the 200 components on the Dragon board, 86 percent are auto-inserted. The remainder — components unique to the board requiring special tooling to auto-insert or components which may not appear on future generations of the board — are inserted by hand.

The boards are then flow-soldered. They are put on to a conveyor belt which takes the boards through a river of molten solder.

Finally the boards are tested on the Marconi Automatic Testing Equipment (ATE), installed at Race. Each finished board is loaded into the machine and lowered on to a test template which makes electrical connections to over 300 places on the board. The ATE's computer then systematically goes through the board checking each component in turn.

Getting a job such as the Dragon board to run down the company's automated production line requires a considerable amount of setting up.

"As soon as we get a new job we try to pass out as much advice as we can to make the design compatible with our assemble equipment," explains Chris.

"How to make it, how to test it, what sort of components we use — we produce a 10-page specification detailing our requirements. Many of our problems stem from lack of foresight on the part of computer designers. The BBC machine, for example, is not very well suited for automated production.

"First we will build a small production run — maybe 10 machines. This is where any snags in the design should begin to show up. There is a very big difference between building five boards in a laboratory and building 50 on a line — things tend to change!

"Then we gradually ease into full production — usually a ramp-up — 100 one week, 120 the next and so on. You have

Chris Lare, technical design manager

got to allow time for the technicians to train themselves — each job presents its own problems.

"Before the automatic insertion and testing equipment can be used the machines have to be programmed — and this is quite time consuming. The ATE tests every component on the board and it has to be programmed to do so. The machine in fact uses a deviant form of Basic called Incite."

Some of the instructions are familiar — For/Next loops, for example — others not so: for example, Link "A4" (113, 244) tells the machine to make two connections to track A4 on the board at positions 113 and 244 (each connection to the board is given a number). Another example: Res "R9" 270.66 (216,208) tells the ATE to test between points 216 and 208 which should have a resistance of 270 ohms with a tolerance of 6%.

If any of the tests produce the wrong value, it's noted by the machine and at the end of the test a print-out is produced, rather like a diagnostic test on a car.

Race Electronics is now manufacturing 4,500 Dragon machines a week and 750 BBC machines (Race is only one of three plants for the BBC). Since the beginning of this year, Race has manufactured 42,000 Dragon boards.

Race employs 153 staff and the production lines work 24 hours a day. The company is not showing much sign of suffering from overseas competition.

"Race has shown that manufacturers are prepared to make considerable investment in high-technology plant in this country — equipment which is as sophisticated as that used in the Far East.

"We also offer the advantage of proximity. You have to be sure you can keep touch with your manufacturing plant and — notwithstanding the import tax on chips — we can match prices from overseas with only a very small differential.

"I am sure that the companies that we manufacture for considered the possibility of overseas production very seriously — but they still chose us."

## From bad to very good

**Brian Cadge** roams through another selection of arcade and adventure games for the Dragon

Adventure games, at least for the Dragon computer, seem to be enjoying great popularity at the moment — even Dragon Data's own range of software includes six adventure titles. Four of the eight programs reviewed here from independent software houses are also adventure/role-playing type games — *Pirates Ahoy*, *Pharaoh's Curse*, *Death's Head Hole* and *Champions*. The others are *Invaders Revenge* and *Alien Blitz* which are arcade games, and the two I shall begin with — *Sultan's Maze* and *Vulcan Noughts and Crosses*.

*Vulcan Noughts and Crosses* from Seta-mander Software comes in their usual custom plastic box with full colour picture sleeve. Inside is a small instruction sheet with clear loading instructions and minimal playing guidelines. The game is a revamped version of three-dimensional noughts and crosses played on four planes set out across the screen. More instructions are included in the program with the choice of zero to two players (zero players means the computer plays a demo game).

The program makes good use of low-res colour graphics, but the computer's pieces are not visible against the background on a black and white tv and there is no simple way to change the colours. This really is an unacceptable oversight on Seta-mander's part and one which I hope they will take note of as the game is useless to anybody not having access to a colour tv.

Each move requires three numbers (plane, X position, Y position). Younger players may find this confusing to remember and a joystick option would have been an advantage. During the computer's move there is a tediously long wait with the appearance of obviously random numbers on the screen. The standard of play is good and is set at the same level which, with practice, is not impossible to beat.

It is a good version of an old game, which if it were not for the problem with black and white tv's and the method of input, would be an excellent game.

*Sultan's Maze* from Gem cannot really be classed as an adventure game. It takes place in Hampton Court maze, which is represented by stunning 3D-graphics showing the view of the hedges and passages to the front and side of you. Your job is to collect the jewels which are scattered about the maze, while avoiding the mad bodyguard who attacks anybody in sight!

All of the commands are single key and are very easy to remember. There are also options to view a summary of the commands at any time (this is very useful) and to see a plan view of the maze showing the

positions of the player, bodyguard and jewels. Viewing the map takes up extra energy, as does jumping through hedges to take short cuts.

There are 10 levels of difficulty, which control the hunting speed of the guard and the time for which the map is displayed. It is worth being caught just to watch the giant red man run towards you, as again the graphics are excellent at this point.

The game is written in Basic, so there is a delay of about three seconds between each picture, but this is quite acceptable. Also, the game is in 'real time' so even if you stand still the guard carries on hunting for you.

*Sultan's Maze* is well packaged, has excellent instructions and loaded every time (quite unusual in this review). It is reasonably priced at £7.95 and is a welcome addition to the range of Dragon software.

### ... a standard adventure game ...

Moving on to the adventure games, you are told that to *Load Pirates Ahoy* you will need a Pclear 1 first to obtain the extra memory required. No mention is made of the fact that if you have been using graphics previously, you must type Pmode0, 1 first or you will get Fc Error.

The game begins by giving you a clue to where the treasures are (there are seven). The locations do not change, but the positions of some of the treasures do. Almost every time I played, the program only let me go to five different locations which became rather frustrating. If you are lucky enough to find the boat, the adventure really starts here. There are some 83 different locations to explore (I have only managed to get to around 28!). Instruc-

tions are given in the usual way — 'Go North', 'Open Hatch' etc, although abbreviations may be used to save aching fingers.

The text presentation on the screen is well-planned with all relevant information shown. The descriptions are useful and numerous if a little terse — no graphics or sound is used.

I found it annoying that there was no option to Save the game so far completed. As one game can take literally hours to play, this would have been a good idea.

I will not give any more away, as this would spoil the game for anyone playing it. As adventure games go, this one is nothing outstanding, but that is not to say that it isn't enjoyable to play. The lack of graphics and sound is not a major drawback in games of this type.

If there is such a beast as a standard adventure game then *Pharaoh's Curse* must be an example. Although the cassette comes with good loading instructions taken from a computer print-out, this game was the most difficult to load. After countless (and I mean countless) I/O Errors, the program did finally load successfully.

This is the type of adventure where nothing ever changes — you always begin in the valley of tombs, the box always contains the snake and so on. There is no list of words that you can use, the only thing to do is try it and see! Typing Help gives a really giveaway clue as to what to do next. Sound and graphics are again neglected and the text is displayed in a messy format. One good point is the Save game option which is lacking in the other games.

Overall, after the trouble I had loading the game I had begun to lose interest anyway, and after 30 minutes of play I was bored stiff! If you enjoy very standard adventures you might consider this one. At only £4.95 it is one of the cheaper games available, but with software you usually get what you pay for.

*Champions* is yet another version of the game where you are a football manager and have to take decisions about your club's future. The game, or simulation if you like, includes a transfer market to buy and sell your players, suspensions, injuries, the league tables and a weekly news page which shows things such as the gas bill (which appears rather regularly) and many other monetary transactions, plus the occasional humorous comment about Jimmy Hill.

You begin in division four (I haven't managed to get out of that one yet) and you can apparently take your team all the way to the cup.

The game would have been vastly improved with some graphic representation of the weekly games — the league tables just appearing after pressing P is not very exciting. Instructions are given clearly on the cassette insert which includes a B/W photo. All commands are mainly one-key

entry and are menu selected, so there is no trouble finding the right one.

If you are a soccer fan you will probably love this game; if you are not you may still find it enjoyable to play as the whole situation depends on your decisions (and a bit of luck, of course). In any case, for only £5.95 it is generally good value for money. It is interesting to note that the game is also available for the ZX81 and BBC model B.

*Death's Head Hole* is a role play/adventure game and is certainly the most original I have yet seen. The instruction sheet is well written and explains the use of single-key commands; eg, N—go north, F—eat food. Also included is a graphic map which is only partially complete. To play the game it is essential that you mark the passages on this map or on some graph paper.

The game involves rescuing three pot-holders who are lost somewhere in the passages. The screen shows equipment, fitness, lights and a brief description of where you are and what is north, south, east and west; eg, 'Stream passage north ... sump south ...'.

The program is very realistic and enjoyable. One feature I particularly liked was the way passages can become blocked, and sumps formed while you are playing so you can't always get out the way you came. The messages which appear do not always fit on the line, meaning that words are split making the presentation appear messy, but this is a minor point.

Playing the game takes at least 30 minutes, and if you do manage to save all three pot-holders you are immediately sent back in without new supplies to find three more. The passages do sometimes contain food or equipment dumps where you can get much-needed supplies to survive a bit longer. I found *Death's Head Hole* challenging and fun to play, and at £5.45 it is recommended to all role players.

## ... less than spectacular ...

There were two arcade style games included in this review. The first was *Alien Blitz* from Gem. It is well packaged and comes on a top-quality cassette which loaded every time. From then on things begin to slide. The game is a variation of the tired *City Bomber* type where you as the pilot of an alien ship must mindlessly

flatten a city in order to land. This version, which for some reason uses black and white graphics only, is one of the worst I have seen. The graphics are flickery and not particularly realistic. There are three levels of play, but these only count when you land. The occasional beep is the only resort made to sound and the explosion if you crash is less than spectacular.

At £7.95 this program is excessively over-priced and certainly is not of the standard of Gem's other game, *Sultan's Maze*.

What could be more different in quality to *Alien Blitz* than *Invaders Revenge* from Microdeal. It is another game converted from the TRS-80C computer and written in machine code. The game is a nice twist on the old *Space Invaders* theme. This time you are the invader who must destroy the earth's ships that "prowl the space lanes" and avoid the laser base which is controlled by the computer.

Very extensive instructions are included in the program (six screen fulls) and several options can be made — joystick or keyboard, one or two players, number of shots on the screen at one time, and overall speed. The only bug I have found is in the two-player game with joysticks — if one player gets more bonus ships than the

other, problems arise controlling the ship.

The hi-res colour graphics are outstanding and the sound is almost unbelievable for a Dragon. It is nice to see that the fact that the Dragon uses potentiometer joysticks has not been ignored as the stick position corresponds directly to your ship's position on the screen.

The game includes motherships, bonus ships at every 10,000 points and an ever-increasing speed. After 15,000 the game is almost suicidally fast. Pressing P freezes the action while you answer the phone, and pressing R in response to "Number of Shots?" allows you to reselect one or two players (the R command was missed out of all of the instructions and was found accidentally).

Eight pounds for a game of this quality is real value for money. *Invaders Revenge* is, in my opinion, one of the best games yet to appear for the Dragon and joins games such as *Donkey King* as another of Microdeal's excellent programs. Other manufacturers should take note of Microdeal as their programs are top quality and the mail order department works by return of post in most cases.

By their very nature, adventure games do not often exploit a machine to its full. The games reviewed here range from bad to very good, but all prices are low compared to other machines in this range and this can only be good news for Dragon owners.

When buying arcade games, it is always difficult to tell from advertisements how good a game really is — "Excellent graphics and sound" seems to be applied to anything these days. If possible see a demonstration of the game in a shop before buying.

Nine months after launch, the Dragon is starting to be complemented with more software, the quality of which is generally good — a good thing for the 40,000+ Dragon owners out there.

## POPULAR COMPUTING WEEKLY

# A timely reminder!

Malcolm Davison presents two timing programs which can be used for boiling eggs or developing photographs

One of the more discreet improvements of the Spectrum computer over its predecessors is the introduction of crystal-controlled oscillators into the circuitry. Apart from regulating tape operations, timing the Beep statement, pacing the microprocessor and colour mixing operations, it gives the user access to what can loosely be described as a 'real-time' clock. I say 'loosely', because its timing is interrupted by Beep and tape operations. Despite this qualification, it still offers possibilities of games 'against the clock' or to use the computer in timing applications.

Additional plug-in hardware is necessary to directly control electrical apparatus. While controlling your central heating or video-recorder may not be priority uses for your Spectrum — its occasional use as a timer for photographic enlargers, to synchronise a slide show, or control your model railway might be seriously considered by some users.

Even without this hardware link, the timing facility may be usefully incorporated into a recipe program to steer a chef through the complexities of Cordon Bleu

cooking, perhaps incorporated into 'cost-of-call' telephone charge program, or in a chess tournament clock program. Here are two programs which may be of use, and will help steer you round the printing errors in the relevant but brief section in the Spectrum manual.

The first program, *Timer*, is a general purpose timing program which could be used for anything from timing your boiled eggs for breakfast, to reminding you to switch on your favourite programs. The program simply asks how many minutes you want timed (up to an hour is accepted) and timing commences once you hit Enter — an alarm sounds at the completion of the elapsed time.

The second program is a versatile process timer routine. Keen photographers who do their own colour processing will know that to repeatedly time three or more processes for the same time intervals is a bore and it is not difficult to forget at what stage you are in the sequence. This program solves the problem — it will time up to ten consecutive processes (although this could easily be

extended) — each up to an hour in length.

The program keeps you informed of which process is in operation, how long the process is and how long has elapsed since it started. An alarm sounds at the end of each process, the screen flashes and, after a suitable interval when all the processes are complete, the program can be reset to the first process again. All this cannot be done by even the most expensive commercial laboratory timers, even if their accuracy is marginally better.

I have found the program to gain about one second every ten minutes, which (for most purposes will be of little consequence (typical photographic processes are only 2-3 minutes). By the way, I hardly need remind keen photographers to keep the television well away from unexposed colour enlarging paper!

The program no doubt has other uses; for example, as a conference timer, or it may have an application in some sporting events where competitors have individual time handicaps to complete a course. You may find the border flash routine (lines 625-655) a useful attention-getter for your programs — and I find it preferable to flashing the words you are trying to read or the area immediately around it.

Both programs make use of the 'double-take' time evaluation suggested in the Spectrum manual.

## 48K ZX SPECTRUM GAMES

### Simply the best Value Software . . .

**TWO CLASSIC GAMES ON ONE TAPE  
FOR ONLY £5.50 INC P & P**

#### MUNCH MAN

- ★ 4 ghosts and power pills
- ★ Real munching action in all 4 directions
- ★ Fruits for extra points
- ★ High score
- ★ Increasing difficulty from easy to impossible
- ★ Superb graphics
- ★ Hold game facility

#### STAR TREK

- All of the usual features plus:
- ★ Automatic short range scan
- ★ Galaxy chart
- ★ Anti-matter bombs
- ★ Klingon attacks on Starbases
- ★ Graphic Warp
- ★ Excellent use of graphics and sound
- ★ 9 levels of play

**VELNOR'S LAIR** only £5.50 inc p & p

Can you find and destroy the evil wizard VELNOR and so prevent his reign of terror on Earth?

- ★ You can be a wizard, warrior or priest
- ★ Use spells such as polymorph, teleport, fireball, shield, heal and dispel undead
- ★ Collect treasure and items to help you in your quest
- ★ Encounter vampires, mummies, goblins, orcs, trolls and other creatures too ghastly to speak of
- ★ Score, save facility and full documentation

## HIRE ZX81/SPECTRUM PROGRAM TAPES

Make the most of your computer by hiring from the original  
and still the only software library offering all these features:

- Over 800 tapes stocked, offering more than 100 different programs from 27 suppliers (all with their permission)
- Includes the latest arcade, adventure and simulation games, business and home utilities, graphics, education etc.
- Up to 40 maker's original copies of very popular tapes enable us to maintain good service
- Descriptive catalogue helps you choose the best tapes for your needs
- FREE quarterly, illustrated magazine posted to all members
- Full-time staff of three offer you a friendly, efficient welcome & service
- Fortnight's hire for £1.40 inc p/p
- All tapes guaranteed loadable; help given with associated problems
- Overseas branches being set up (Malta already operating); franchises available for some countries
- Send SAE for details, or join on money-back no-risk approval today
- "An exceptionally professional and thriving organisation"—review in Eric Deason's "Guide to ZX Spectrum Resources"

The SINCLAIR OWNERS'  
**SOFTWARE LIBRARY**  
Warren Road, Liss, Hants GU33 7DD.

Please send me on money-back approval my magazine, descriptive library catalogue and order form, on the understanding that if I'm not delighted with your service within 28 days you will refund my money in full.

NAME .....

ADDRESS .....

Please enclose cheque/P.O. for £8.50 (year's ZX81 membership) / £9.50 (Spectrum). Overseas £2 extra in each case.

# The art of design

**B D Skinner** explains how to design programs from the top down

**T**DSP (Top Down Structured Programming) is the acronym given to a way of writing good programs. Program design is an art and too many would-be programmers spend hours debugging programs which have been invented at the keyboard.

Program design should begin with defining the aims of the program. Once the 'problem space' has been defined, the solution may be set out in a flowchart which represents the algorithm chosen. Then, once the problem and its solution have been broken down into small parts, 'coding' — putting the algorithm into a computer language such as Basic — can begin. Finally, and perhaps least importantly, you can enter and test the code.

Central to the TDSP approach is the concept of a 'routine'. A routine is simply a set of instructions which perform some task — micros have a machine code routine to clear the screen which can be 'called up' by typing the correct command.

Similarly, programs should be designed such that they are a collection of routines in Basic which can be called up within the body of a program itself. Thus, for example, we may define a 'subroutine' within a program which clears the screen (using the operating system command above) and then draws a border at the screen margins. Such a routine could then be called up prior to the displaying of other information such as a 'menu' of user options.

Subroutines are easy to define in Basic — if a little confusing at first. To begin with, nothing need mark the start of a subroutine — it is a good idea to make full use of `REM` statements to identify each subroutine. For the more advanced programmer, this also means that you can jump into a subroutine anywhere. The end of a subroutine must, however, be marked by a `Return` statement.

Let us now look at the coding of a subroutine to provide a pause in a program. The 'heart' of the subroutine will be an 'empty' `For ... Next` loop, which will instruct the computer to perform a set of operations a certain number of times. In this instance, we will instruct the computer to do nothing several times. Such a loop would take the form:

```
1010 FOR PS = 1 TO 2000
1020 NEXT PS
```

When these lines are encountered, the computer will 'twiddle its thumbs' 2000 times, then carry on with the next line. To turn these two lines into a usable subroutine, we must add the next line — a `Return` statement — and a `Rem` statement to remind us of the function of the lines:

```
1000 REM PAUSE SUBROUTINE
1010 FOR PS = 1 TO 2000
1020 NEXT PS
1030 RETURN
1040 REM END OF PAUSE SUBROUTINE
```

Now, whenever we want a pause in a program, we simply call up this subroutine with the statement `Gosub 1000` — the program will then 'loop' or 'branch' down to line 1000, perform 2000 `For ... Next` loops and then return to the statement after the `Gosub` command which called the subroutine.

Obviously, if we wanted to double the length of the pause we simply call the routine twice:

```
100 GOSUB 1000
110 GOSUB 1000
```

This is however clumsy and poor practice — what we really require is a pause routine of variable length so that we can have a long pause or a short one, both mediated by the same subroutine. This is quite easy, all we need do is to introduce a variable into the program — let us call it `PL` to stand for *Pause Length*. We now need to alter line 1010 to read:

```
1010 FOR PS = 1 TO PL
```

Now we must remember to define `PL` before calling the subroutine; for example, for a short pause we might write:

```
200 LET PL = 500
210 GOSUB 1000
```

while for a longer pause we might write:

```
500 LET PL = 9000
510 GOSUB 1000
```

While this technique of passing variables to subroutines is very useful, it does mean that we must be quite careful not to use the variable `PL` for any other purpose

in a program, or we will get some odd results.

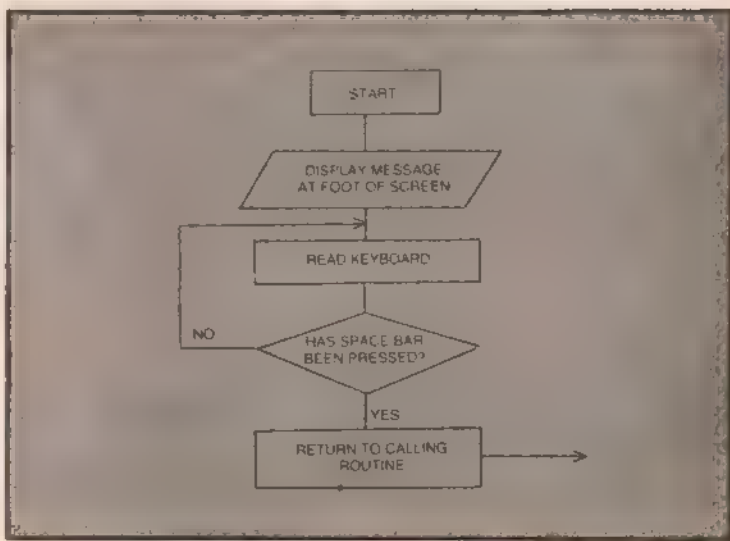

Practically speaking, pauses are of little value in programs. It is far better psychologically to prompt the user to press a key before the program carries on. In order to do this we want the program to display a message which does not interfere with whatever is already on the screen — so we can reserve the bottom line for this purpose. Secondly, we must define which key is to be used — the space bar is convenient — and finally the program should only recognise a press of this key as a 'user response'. The next stage is to draw up the flowchart which represents a solution to this program.

Coding this algorithm is now relatively simple, but since screen-handling is perhaps one of the most marked differences between the dialects of Basic, you may have to consult your users manual for the exact phrasing of this example for it to run on your machine. This version is written for the Dragon 32.

```
9000 REM PRESS SPACE TO CONTINUE
9010 PRINT @ 480, "PRESS THE SPACE BAR TO CONTINUE"
9020 AS = INKEY$
9030 IF AS = >CHR$(32) THEN GOTO 9020
9040 RETURN
9050 REM END OF SUBROUTINE
```

Line 9010 presents the message starting at screen position 480 — the bottom left-hand corner of the screen. Line 9020 reads the keyboard and sets `AS` to whatever key (if any) has been pressed, while line 9030 tests `AS` to see if it is a space. Line 9030 also passes control back to line 9020 if `AS` was not a space. Line 9040 returns control to the statement following the `Gosub 9000` which called up the subroutine.

You could also add `9035 Print @ 480, String$(31,32);` which will clear the message before the `Return` is executed.

# Law of averages

Calvin Woodings explains how to detect variations in data with time series plotting

This program enables you to detect variations in data by plotting results in two different ways. The first is the straightforward time series (or control chart) where results are plotted as they arise, and the second utilises the Cumulative Sum (or Cusum) technique, this being a particularly powerful way of highlighting small changes in a series of results. Examples of both techniques are given below, figures 1 and 2 illustrating how the program plots the time series and the cusum respectively.

The data was gathered by measuring rods produced by an automatic cutting machine. Samples were taken every hour over a 40-hour period — figure 1 is a graph of the actual results of rod length in inches against time for the 40 samples. The X-axis is drawn at a point on the Y-axis corresponding to the average rod length.

The scatter of results is seen to be from 97 to 104 inches with a mean value of just over 100. You can probably just detect the hint of a change in average rod length occurring at about one hour 20, but unfortunately the scatter of results makes it difficult to be certain about this. This is where the Cusum plot shown in figure 2 comes to the rescue.

Figure 2 is obtained from the same set of rod lengths, but the points plotted arise from the following calculations:

- The average rod length (*mean*) is calculated from all 40 results.
- The average is subtracted from the first result and the difference obtained is plotted ( $Y_1 = \text{result}_1 - \text{mean}$ ).
- The average is subtracted from the second result — this difference is added to the first difference, and this sum is plotted as the next point ( $Y_2 = Y_1 + \text{result}_2 - \text{mean}$ ).
- This process is repeated for each result, the graph thus being a graph of the accumulated sums of the differences between each result and the average [ $Y(n) = Y(n-1) + \text{result}(n) - \text{mean}$ ].

When interpreting a Cusum from this program, several points need to be borne in mind. The first is that the X-axis is always plotted at the mean value which in Y-axis Cusum units is zero. From this base, any upward run of results indicates a sequence of above average results, but not necessarily a sequence of increasing results. Similarly, a downward sloping plot indicates a sequence of below average results, but not necessarily a diminishing sequence.

Any sharp change of slope indicates a significant change in the overall level of results — the point in time where the sharp change occurred. Gradual slope changes (ie, curved graphs) suggest an increasing or decreasing sequence of results. (Try plotting numbers from 1 to 20. This gives a

straight line — the time-series but a smooth curve in the Cusum plot.)

Looking at figure 2, we can therefore deduce the following:

- There was a significant change of level of rod lengths at about result 21. Something happened at this time either on the machine or in the measurement process.
- Prior to this, the generally upward run of points between 1 and 21 show that the lengths were generally above average, and by inspection you can see that with an accumulated difference of 19 (peak on Y-axis) being reached at hour 21, the lengths were running at 1.1 inches above the overall average value of 100.2 inches.
- After the peak, the accumulated difference falls to zero again in the space of the next 19 samples. Thus the lengths were generally below average, by about 1 inch, over this period.

All Cusum plots calculated using the average as a base value will start and end on the baseline, ie, an accumulated difference of zero. However, in some applications, the average is never known because the results are added to the graph as they come in, and hence a base value has to be chosen arbitrarily. If the base value turns out to be significantly above or below the average which emerges, then the Cusum plot will tend to move generally downwards or upwards respectively. This

can make plotting within the confines of a CRT difficult when more than a few results are involved!

## Program Notes

The main program resides between lines 50 and 220. Lines 230 to 850 contain the utility procedures which, but for minor alterations, are the same as those used in previous programs in this series. If you have already typed them in once for a previous program, you should start by loading them, renumbering them and editing them as appropriate.

*Procchoice* simply allows you to select the type of plot you wish to use. *Procanalysis* calculates the average, the Cusum points (line 1000), and the factors which enable the graphs to be fitted tidily on to the screen (*Yscr*, *Ycus* and *Xscale*).

*Procplot* (B\$) draws the graph as required by the parameter B\$, which is given the value of "cusum" or "series" by line 140. Line 1130 sets the graphics origin according to the need to draw the X-axis at the average value for the series plot and at the zero value for the Cusum. Line 1150 sets the starting point for plot at 0.0 for the Cusum, and at the right position for the first result in the series plot.

The loop between lines 1160 and 1190 draws the lines which link up the plotted points, and the loop from lines 1210 to 1250 labels the X-axis. Line 1270 puts the scale on the Y-axis, and *Proclabel* prints the Y-axis label down the left-hand side of the screen in a position where it won't clash with the Y-axis scale.

Scale formatting is controlled by the "@%=&307" at line 1100, and by the "Move=250" in line 1270.

## COULD YOU BE THE NEXT BRIAN CLOUGH?

Take your team from the 4th Division to the European Cup! Features 4 divisions, promotion, relegation, transfers, injuries, suspensions, weekly results and league tables, reserve team, crowd trouble, and the fun, drama and frustration of managing a league club.

If you don't give two hoots for football, you'll be hooked. If you're a fan, you'll be playing all night! One of the most entertaining games currently available — it's the one that we play!

**LIONHEART (Dragon only) £5.45** — Unique, two-part romp. Arcade-style action as you assemble your army, pursued by the ruthless Prince John, switches to colourful graphics adventure as you land in the Holy Land and mount your Crusade against the Sultan Saladin.

**DEATH'S HEAD HOLE (Dragon/BBC B) £5.45** — Our highly-acclaimed adventure. Lead a mission of mercy into a Mendips pothole. When you discover who's down there, you'll wish you'd stayed at home! "Breaks new ground in home computer simulations" — *Dragon's Teeth*.

**DON'T PANIC! (Dragon only) £3.45** — Two classic adventures at an incredible price, to launch our new Bargain Bytes series. Features Towers of Death and The Ice Kingdom. Villains and hazards galore.

**HANG IT! (Dragon only) £5.45** — 1,000 (yes, 1,000!) posers on British place names in this family word game. Set your own problems option.

All prices include post and packing. We **GUARANTEE** same day despatch by first-class post. Clip the coupon, or simply note your name, address, computer and programs required on the back of your cheque.

## MEMIC-81

*Faster than a Floppy  
Easier than an EPROM*

A 4 kilobyte memory module using chips fabricated in a remarkable technology. When not actually in use, these CMOS chips can be put into standby. The Lithium battery fitted in the unit will last for 10 years. Plug it into the ZX81 and flick a switch and the data is ready for retrieval. MEMIC-81 resides in the 8-12K area of ZX81's memory map. This area is not directly addressed by Basic, but Basic programs can easily be stored and retrieved by means of the tiny 12 byte routine provided. This can itself be stored in MEMIC-81.

## C★TECH SOFTWARE

### ZX Spectrum Software

### DRAGON

## ROCKET RAIDER

Probably the best game you will ever see on the Spectrum. It penetrates the planets other programs will never reach. There are four incredible screens all with increasing difficulty and detail.

You are piloting a space ship through deep space when you are attacked by a force of mutant alien craft. They retreat to a planet you can see on your long range scanner and you decide to go down and investigate.

You discover a planet scarred by four trenches (caused by the impact of giant meteors), you fly into them and discover colonies of mutant invaders, fuel dumps, missile installations and orbiting mines. Using your bombs and streams of laser torpedoes, you must annihilate the enemy installations.

But perhaps the most amazing thing is that this superb machine code multiple screen arcade game fits into the 16K Spectrum as well as 48K.

This program is not yet available in shops — only direct from C★Tech, price £6.50.

## FIGHTER PILOT/ CITY BOMBER

FIGHTER PILOT is an ingenious program for the Dragon 32. It begins with a briefing session giving details of the fire attack waves and shows you pictures of the aircraft which include Messerschmidt and Junkers. You have to get the aeroplanes within your sights and shoot them down. There are five different screens including a parachuting sequence. It makes full use of Hi-Res graphics, colour and sound.  
CITY BOMBER involves bombing buildings whilst your plane flies lower and lower towards them. All this for the unbelievable price of £6.00.

### HOW AND WHERE TO GET C★Tech Software PRODUCTS

There are three ways to get the tape that you require. Firstly you can go to one of around 50 retailers in the UK and some more overseas, there is at least one in every town and several in major cities.  
Secondly you can ring our Telesales on 061-366 6223 and Alison or Shirley will take your order and tell you of any other games you might be interested in. Last the most popular way is to simply clip the coupon and send it to us at: C★Tech, 184 Market Street, HYDE, CHESHIRE, SK14 1EX.

# Face the music . . .

*Peter Chase presents a series of machine code sound routines for the Dragon*

The Dragon has been accused of being a rather unsophisticated machine. For instance, the sound comprises single notes, the keyboard scanning using *Inkey\$* has the limitation of only allowing one key to be pressed at a time, the use of colours is restricted, there are no true user-defined graphics and the scrolling movements of the screen are limited. With the help of machine-code routines, I will show you how the Dragon can be persuaded to do much more.

To write long sections of machine code, you need to use assembly language. In an assembly language, each machine instruction is replaced by an instruction using a short 'word' for the operation code (eg, for the 6809 chip in the Dragon these include *Add, Inc* and amusingly *Bra* and *Sax*) and a letter or letters for the memory address. The assembler package then converts each instruction

into the equivalent machine code.

The assembler package I use is *Dasm* from Compuserve which is cartridge based and has the advantage that the assembly codes can be used with Basic — edited and saved using the normal commands. However, if you do not wish to invest in an assembler as yet, I will also show how the machine code can be put into Basic programs using *Poke* and *Exec*.

First, some fun and games with the sound generator. The sound source is selected at locations FF23, FF01 and FF03. To select the six-bit source you need to clear bit 3 of FF01 and FF03 and set bit 3 of FF23. This can be done either with machine code, or with Basic by typing in the following lines each time the computer is switched on:

```
1 POKE &HFF23,PEEK(&HFF23) OR 8
2 POKE &HFF01,PEEK(&HFF01) AND 247
3 POKE &HFF03,PEEK(&HFF03) AND 247
```

The sound emitted is affected by the contents of FF20. Listing 1 shows how a very weird polyphonic sound can be produced by constantly loading FF20 with the

contents of the timer (location 1313). It has to be heard to be believed. Listing 2 shows how to put in the machine code without an assembler.

If you wish to save just the machine code routine, then use *Csave* "Sound", X,Y,Z where X is the address of the beginning of the machine code (in this case &H6000), Y is the address of the end of the machine code and Z the difference between X and Y. The finish address can be found by printing out the contents of all locations from the start of the machine code.

Listing 3 is a subroutine to provide music in an assembly program. It should be called using *JSR @MUSIC*, having placed the value for the pitch in X with *Ldx* and putting the duration value into Y with *Ldy*. Incidentally, if you type in the listing alone and assemble and *Exec* it, a 'walking sound' is produced because X and Y are cleared.

Listing 4 gives another unusual sound effect which can be produced using machine code. It can be typed in using the method shown in listing 2, if you do not have an assembler. The hex machine codes to be entered in line 150 are the second column of numbers starting 10,8E,00,01.

# OPEN FORUM

Open Forum is for you to publish your programs and ideas. Take care that the listings you send in are all bug-free. Your documentation should start with a general description of the program and what it does and then give some detail of how the program is constructed. We will pay the *Program of the Week* double our new fee of £6 for each program published.

## House of Horror

on ZX81

This is a game for a 16K ZX81. The aim is to go down staircases to the bottom of the house. You start on the top floor

as an "O".

You must reach a staircase to get down the next floor. A staircase is an "=" sign and you will go down it automatically.

There are 2 staircases on every floor. You move right by pressing "2" and "1" to go left. When trying to find a staircase you

might come across a gap. This is a pit you must jump over. To do this you press "0" to jump right and "9" to jump left. You jump a random number of steps.

Another lurking horror is a ghost which chases you. If this gets too close then jump over it. To make the game harder then leave out line 131.

If you do finally get down the last ladder then your time will be displayed.

The machine code in line 1 can be typed in as in the listings. This is the line more clearly:

1 Rem (graphic shift 1,2=spaces  
E: Function T ? Function E).

```

1 REM * E:RND?TAN

## Space Zombies

on Vic20

This program is a space invader program for a Vic20 with a super expander or 3K Ram pack.

The program uses the Rjoy(0) command of the super expander and so if you have got a 3K Ram pack this will have to be changed to lines 425-435.

The program uses user defined graphics and some machine code to move the invaders.

There is a barrier under the invaders and the only way to get past this is to shoot so it moves on to your bullet. You have two minutes to score as much as possible.

The Rem statements should be enough to see how the program works.

## Lander

### on Dragon

The object of the game is to land your space module on the green landing pad using a joystick to control the horizontal motion. After a safe landing the game continues with the space module descending at a greater speed.

The aim is to score as many points as possible by landing safely. If the landing pad is missed the game is over and "YOU CRASHED" is displayed.

When you are within 20 miles of the pad your retro rockets can be activated by the

fire button on the joystick.

The use of the retro rockets is essential when you are travelling at more than 10 miles per time unit.

A speed prompt of 1 is useful to obtain an idea of the game, but subsequently starting speeds of 4 or greater are recommended. The number input at the speed increase prompt should be between 1 and 8.

#### Program notes

30-40 Prompts  
50 Delay loop  
60 Set position variables  
80-90 Hi-res graphics  
95 Set second speed variable

100-140 Hi-res graphics  
150-170 Movement routine  
180-190 Check retros  
200 Sound  
210-250 Crash or land routines  
260-270 Anti PC error routines  
1020-1030 Reset variables  
1040 Display points

#### Variables

X and Y Module coordinates  
S Speed  
V Speed increase  
J Delay variable  
SR Back-up speed variable  
W Check fire button  
M Retro variable  
B Score

SR is a back-up variable to ensure that the retros do not inhibit your speed for the next flight.

## Goblets

### on BBC Micro

This graphics program draws three dimen-

sional goblets shaded so that it appears as if there is a light shining on them.

This program is designed for use on a

black and white TV so if you are using a colour set turn the colour down. It runs on a 32K BBC micro.

## Clay Pigeon Shoot

on Lynx

An addictive game for the Lynx. A clay

pigeon flies across the screen and you shoot it using the space bar. The computer will sound a bleep if you hit it.

The skill levels determine how fast the pigeon flies. You have 20 shots and at the end are awarded your score.

## Format

on Dragon

Dragon and other micro users will find this set of routines to be a time saver. They allow a programmer to define sentences and have them printed on the screen without having to count up sentence length to avoid "wrap-around". The routines are particularly useful for displaying game instructions, pages of information, etc.

Lines 10-60 show how sentences are

defined, while lines 1000-1050 and 1060-1090 are the routines which handle the screen formatting.

The subroutine at 1000 adds a space to the sentence or phrase, since a space is used as a cue to print a word. Missing this out will mean that the last word of a sentence is not printed.

LS is used to hold each character of the sentence in turn. If LS is a space, CH\$(32), the subroutine at 1060 is called before the next group of characters is processed. WS is used to hold each group

of characters.

The subroutine at 1060 calculates whether or not a word will fit on to the current print line. Pos (1) returns the current horizontal print position — note that the routine could be adapted for use with a printer by using Pos (-2). If a word will not fit on to the print lines, a line feed (CH\$(13)) is printed before the word is displayed.

Removing the Rem statement in line 1080 will cause each new sentence to be printed on a new line.

```
10 NC = 32: REM SCREEN WIDTH (NUMBER OF COLUMNS)
20 CLS
30 AS = "THIS IS THE FIRST SENTENCE WHICH IS TOO LONG TO FIT ONTO A SINGLE LINE."
  :GOSUB 1000
40 AS = "THIS IS THE SECOND SENTENCE, WHICH IS ALSO TOO LONG TO BE DISPLAYED ON ONE LINE.": GOSUB 1000
50 REM REST OF PROGRAM
60 END
```

```
1000 LS = " ": WS = " ": AS = AS + CH$(32)
1010 PRINT STRING$(1,32);
1020 FOR I = 1 TO LEN(AS)
1030 LS = MID$(AS,I,1): WS = WS + LS
1040 IF LS = CH$(32) THEN GOSUB 1060
1050 NEXT I: RETURN
1060 IF POS(1) + LEN(WS) > NC THEN PRINT CH$(13);
1070 PRINT WS;
1080 REM IF MID$(WS,LEN(WS)-1,1) = " " THEN PRINT CH$(13);
1090 WS = " ": RETURN
```

## Lunar Lander

on Vic20

This is a program of lunar lander that uses user definable graphics and runs in 3.5K. Before typing in the lunar lander program you must type in the initialisation. When this is run it loads the user definable graphics into the memory, after it has been run it can be *Newed* and the lunar lander program can be typed in.

When the program is run a landscape is printed with the height, velocity, fuel and drift printed in the bottom left corner. The

lander appears in a random position at the top of the screen and you have to land it on the two black squares with the velocity between  $-30$  and  $0$ . You use the following keys:

5— Downward thrust

1— Left thrust

9— Right thrust

If you use the side thrusters you can only stop moving by using the opposite key.

### Variables

X— Screen address

C— Colour address

H— Height

Fuel

V— Velocity

QW— Drift

A—Keyboard entry

Z— The height of each line

### Program notes

11 Makes all keys repeat

60-129 Prints landscape

170	Gets keyboard entry
-----	---------------------

100-201	Processes the keyboard entry
100-202	Manages the input and output

215-226 Moves lander up and down  
227-234 Flaps height, velocity, fuel

250-271 Prints height, velocity, fuel and drift  
222-227 Photo to show if loader has gone

289-295 Checks to see if lander has crashed or landed.

landed  
1950-1999: 5000

1999-1200 Sound effects for safe landing  
1500-2065 Sound effects for crash

1-800-275-54 SOUND EFFECTS FOR CRASH

### SOFTWARE FOR DRAGON 32

Hi-RES High Resolution Display for DRAGON 32

Supplied on Cartridge, for DRAGON 32 price £25.90

Hi-RES gives you a 51 column by 24 line display instead of the 32 column by 15 line display on your DRAGON 32 computer. If that was all it would be quite something, but in addition Hi-RES has the following features:

- Hi-RES does not eliminate BASIC
- Upper and lower case as standard
- Auto repeat, international character sets
- Improved shift control to give more key values
- Redefinable characters and Sprites
- Extra BASIC commands for screen control
- About 19,500 bytes available for BASIC programs
- Load and save programs and use printer normally
- Return to standard display mode at any time
- Graphics and text can be mixed on the screen

We firmly believe that Hi-RES is the most useful and powerful software item you can obtain for your DRAGON 32 computer.

Hi-RES does not invalidate any programs you have written so far, although you will find that they can be enhanced to take advantage of your new BIG screen — over twice the capacity of the existing screen.

How easy is Hi-RES to use?

Just plug the cartridge in, switch on your computer and Hi-RES will be in action. You will wonder how you ever managed before Hi-RES was around.

What about Graphics?

Hi-RES allows Sprite graphics which are not available on a standard DRAGON 32, if the entire character set is used then over two hundred sprites can be defined in a single program! The BASIC graphics functions work directly on the Hi-RES screen allowing you to mix text and drawings. Hi-RES allows two colours, green and white, in both normal (black on colour) and inverted (colour on black) mode.

What extra commands do I get?

Hi-RES implements two extra PRINT statements to allow normal and sprite printing on the big screen. Extra functions (about twenty) have been added to the CLS command. These allow you to change character sets, switch the cursor on and off, underline text and more.

Is there anything else?

Yes. Hi-RES extends the keyboard so that an extra shift is possible on the top row of keys. We supply you with a free overlay which neatly positions over the top of your keyboard, you write in the values depending on the character set selected.

Sounds good? — It's even better in the flesh! Place your order by phone or post or send a LARGE SAE for details of all our products.

Order by ACCESS-VISA or cheque 15 telephone or post 24-hour answerphone service.

## GAMES CENTRE

THE LARGEST SELECTION  
OF GAMES IN THE WORLD

254 REGENT STREET, London W.1.

## GEM SOFTWARE

for LYNX, DRAGON,  
SPECTRUM AND ZX81

### Software

**MONSTER MINE** by W. E. MacGowan. Escape from the mine with as much money as you can but don't get caught by the prowling monsters. An addictive machine code game, with superb graphics and save facility. Price (LYNX and DRAGON) £7.95 (SPECTRUM and ZX81) £4.95

**SULTAN & MAZE** by Christopher Hunt. Enter the 3D Maze in search of the Sultan's jewels. Beware, your strength may run out, or you may come face to face with the Mad Guardian. A multi-difficulty game with fantastic graphics and sound. Price (LYNX and DRAGON) £7.95

**SPACE MULEBOY** by W. E. MacGowan. Launch from lunar base, fight your way through the asteroid belt to do battle with the enemy fleet. Multi-level space combat game, sets new standards in graphic excellence and attention to detail. Price (DRAGON) £7.95 (SPECTRUM and ZX81) £4.95

**CHARACTER GENERATOR** by John Line. A program for the programmer, allowing creation and saving of character set/shapes tables and subsequent inclusion into users' basic program. Demonstration program and full ASCII character set included. Price (DRAGON) £3.95

**GEMPACK IV** by W. E. MacGowan. Two great machine code games with full colour graphics. In *Chemical Wars* you must land your plane on the aircraft carrier, after dispersing the clouds with chemical bombs, but don't fill the ship! In *Bob Chases* you must catch the wolf pack without being sunk. Both with four levels of play from easy to kamikaze! Price (LYNX and DRAGON) £7.95

**ALIEN BLITZ** by Peter Chase. Your craft is running low on fuel and you must land! You have to use your bombs to clear a space amongst the skyscrapers but beware the craters! A superb multi-level action game for the Dragon, with superb sound and graphics. Price £7.95

**FUNMATHS I** by Peter Chase. Improve your maths while you play these five great games! In *Number Race* you must beat the computer, or a friend, to exactly 100 by using the numbers. *Maths Maze* asks questions as you work your way around the maze. *Chemist* is a game of raves where you mix two chemicals, trying not to get blown up! *Dragon* exercises your skills in engineering co-ordinates — you have to find the Dragon hidden in a grid. Last but by no means least, *Sinix* tests your memory for tunes colour numbers. Price (DRAGON) £3.95

**LYNX COMPUTING** by Iain Sinclair. Excellent book which the beginner will find an invaluable aid in helping to unravel the LYNX's many varied features! Price £5.95

All titles available mail order or Access. All cassettes despatched by return of post.

## Memory Map

on Spectrum

This program uses the Spectrum's memory mapped screen and colour memory map. It first fills the screen with a random pattern effect in hi-resolution. Then it pokes random colours into each screen location. When this happens a strange effect appears, certain squares flash between one pattern and another, giving a strange but pleasing effect.

```

5 REM screen memory map
10 LET a=16384
20 POKE a,INT (RND*255)
30 LET a=a+1
40 IF a=22560 THEN GO TO 60
50 GO TO 20
60 POKE a,INT (RND*255)
70 LET a=a+1
80 IF a=22560+768 THEN STOP
90 GO TO 60

```

**Memory Map**  
by Daniel Lucas

## Adventure code

(see page 35)

```

10 LET S=1
10 INPUT "ENTER TONE & MESSAGE
    -- DON'T FORGET THE
    00:01"
10 LET CN = LEN (S) : = 75 INT
    (LEN(CN)/75)
20 IF CN>0 THEN LET CN = CN+3
20 IF CN = LEN (S) THEN LET
    CN = CN-1
30 FOR N = 1 TO LEN (S)
40 LET X = 0
40 FOR I = 1 TO CN
45 FOR J = 1 TO LEN (S) STEP CN
50 LET X = X+1
55 IF J = N THEN LET S = S+
    MID$(S,X,1)
    I THEN LET S =
    S + C$(I)
50 NEXT J
65 NEXT I
70 NEXT N
80 PRINT S

```

THE S'S THAT I REFER TO WILL  
APPEAR IN FOR SPACES. SO THAT  
SHOULD BE NO CONFUSION.

## Cruising & Blind Alley

**£10 to  
be won**

**Can you beat  
the new  
high score?**

### Cruising

First there was *Space Invaders*, then there was *Pacman* - now there is *Cruising*. This all-action, machine code, arcade type game, will test your powers of co-ordination to the limit. Never before has a game asked you to think so quickly, or move so fast.

Achieving a high score on *Cruising* takes considerable skill, and not a little patience.

*Popular Computing Weekly* is offering £10 each month to the player with the highest score on *Cruising*. All you have to do to enter this month's competition is send a print-out of your highest score, together with your name and address, to

*Popular Computing Weekly*  
*Cruising*

Hobhouse Court  
19 Whitcomb Street  
London WC2 7HF

Each month we will publish the name of the winner and the new *Cruising* high score. Are you good enough to accept the *Cruising* challenge?

The winner of last month's competition with a score of 9411 was I. C. Willis of Shore Lane, Sheffield, who receives £10. Entries for this month's competition close on May 31.

### Notes

1) Each entry must consist of a ZX printout and your name and address.

- 2) Closing date for this month's *Cruising* challenge entries is April 30.
- 3) The highest score each month will receive £10.
- 4) High scores cannot be transferred from one month to another.
- 5) The judges' decision is final.
- 6) No employees of *Sunshine Publications Ltd.* or their families, will be eligible to enter.

### Blind Alley

*Blind Alley* is a game of strategy. In order to win you must outwit the computer, using your craft to fence in and finally destroy the enemy pursuit vehicles. But, watch out for the solid trail left by your opponents - one touch is fatal!

Each month *Popular Computing Weekly* is giving away £10 to the player with the highest score on *Blind Alley*. To enter this month's competition simply send in a copy of your score and the code at the bottom of the score table, together with your name and address to:

*Popular Computing Weekly*  
*Blind Alley*  
Hobhouse Court  
19 Whitcomb Street  
London WC2 7HF

The highest score sent in so far is 15480 from Stephen Melakos of Purley, Surrey. Entries for this month's competition close on May 31.

## NUMBER ONE FOR THE DRAGON! DRAGONWARE

The vaults of the Dragon Dungeon are packed with the widest range of Dragon 32 software and peripherals available in the UK. Send for our 30-page Dragonware Catalogue and kill the myth that the beast lacks programs! (Catalogue 50p, refundable on first order — free to Club Members.)

## DRAGON OWNERS CLUB

The Dungeon is also the home of the largest Dragon Owners Club and publishes the monthly Club Magazine "Dragon's Teeth". News, reviews, advice and information exchange for dedicated Dragon-bashers. Monthly money-saving offers, monthly competitions, Clubware from badges to bomber jackets. Free members' adverts.

Annual Membership £6.00 (£8.00 overseas) or six-month Trial Sub. £3.25 (£4.25 overseas.)

## Problems, problems

I am very pleased with the response to the column — adventure in all its forms is obviously a major pastime for the computing world.

Incidentally, one or two of you have mentioned that a full page would be a good idea. I agree! If I just keep on writing, maybe good old Ed won't notice.

One of the adventures that seems to pose insurmountable problems to many of you, *Madness and the Minotaur*. I contacted Dragon Data about the problem

that seems to be foxing most of you, and they promised to send me help sheet to me. Unfortunately, I have not received it yet, so I'm afraid that the mushroom will have to remain elusive!

I can only suggest that you contact Dragon Data and see if you have more luck.

If I hear from Dragon Data about the mysterious mushroom, I'll pass the information on to you.

Mr Weaver, of Clackmannanshire, has a Dragon (the small kind that sits on a table, that is!), and has had trouble with a program originally available for the Tandy range. The adventure is *Raaka-Tu*, and he is stuck at the gargoyles. He wonders if there could be a problem with the Dragon-Tandy conversion. Well, this is a distinct possibility, and one that should be borne in mind when buying. If any TRS-er can help Mr Weaver, please let me know.

Before looking at some more problems, I think a little program would come in handy. I've devised, with the welcome help of David (Working Spectrum/Dragon/Commodore 64) Lawrence, a small decoding routine (see page 33). Enter this now — the Basic is pretty standard, except for a line that Sinclair owners will need to replace with [stuff in square brackets like this]. Then, when I need to pass on your clues to people in a jam, I can give them a coded message — if you don't want to see the clue, just skip over it (if you're very

good at anagrams, hard luck, clever clogs!).

My apologies to J Hughes from Dyfed, who sent me a very good program to decode his own encoded clue for the mainframe adventure that I was writing about a couple of weeks ago. I'll return to the mainframe next week.

Now, Tresco Richards, if you remember, was stuck in *Adventureland*, a Vic20 program. He was having trouble with a bear on his way to the treasure. Luke Oatham and James Saywell have both sent in the same clue. James, in fact, says that the bear problem is the most illogical part of the whole game, so there may well be others of you who have the same problem. If you wish to know the answer Run our little decoding program and type this in (\*\*s and all don't forget!):

"h'brahlyohy" re "lelo 'd." 't dnoe'leol"

That should do the trick!

This series of articles is designed for novice and experienced Adventurers alike. Each week Tony Bridge will be looking at different Adventures and advising you on some of the problems and pitfalls you can expect to encounter. So, if you have an Adventure you want reviewed, or if you are stuck in an Adventure and cannot progress any further, write to: Tony Bridge, Adventure Corner, Popular Computing Weekly, Hobhouse Court, 19 Whitcomb Street, London WC2 7HF.

## Adventure Competition

Write an adventure game and win a Commodore 64!

Popular Computing Weekly is offering a star prize of a Commodore 64 for the best adventure game written for any home micro — PLUS — a special prize of a Vic20 for the best essay on an adventure theme — PLUS — for the next 10 runners-up, two Commodore adventure games of their choice.

Each week during May, Popular Computing Weekly will publish a coupon — simply cut out any three and send them with your entry.

The best adventure games are ideally a combination of action and logical riddles. For instance, to open a door, the player should not merely have to find the magic word, but have to solve a puzzle in order to progress to the next location. Good graphics obviously enhance a program — and we'll be looking for a game that makes imaginative use of graphics, although that does not mean that a text-only program will be eliminated.

Other things we will be looking for are the surprise twists that make a program worth coming back to again and again.

And remember, don't make your game too difficult in the early stages — adventuring novices should have a chance to get some way into the game before getting stuck!

For those of you submitting scenarios with your program, think of it as a guide line for a programmer. Draw a map showing location objects and other important details in your

adventure, and compile a dictionary of key words that your program will accept.

If you do not want to write a full-blown adventure game, you can still enter the competition by writing an essay (up to 2,000 words) on an original adventure theme. A Vic20 will be awarded the essay which describes the most original and interesting adventure game.

The competition will be judged by Tony Bridge and Popular Computing Weekly editor Brendon Gore.

### PRIZES

1. Commodore 64
2. Vic20
3. Two Commodore adventure games of your choice for 10 runners-up

### HOW TO ENTER

All you have to do to enter this competition is collect the coupons from three issues of the magazine and send them, together with your entry (stating which machine your game is for) and your name and address, to:

Popular Computing Weekly  
Adventure Competition  
Hobhouse Court  
19 Whitcomb Street  
London WC2 7HF

### RULES

1. Each entry must consist of your adventure, or essay, together with three coupons, and your name and address.
2. Closing date for the Adventure Competition is 30 June 1983.
3. The judges' decision is final.
4. No employees of Sunshine Publications Ltd, or their families, will be eligible to enter.

## TANDY PROBLEMS

M V Buswell of Stevens Road, Stourbridge, West Midlands, writes:

**Q** My son has a Tandy TRS-80, Basic Colour Computer (16K), which after a short while he now finds very limiting. He is hoping to make computing his career, and wanting to give him every encouragement we are willing to extend the computer to give him extra facilities. The real drawback is the apparent lack of any literature, books, etc for the computer.

Since last December we have bought various Micro magazines and on only one occasion have we found a program for the TRS-80, and that was for a black and white model which would not *Run* on the Colour Computer. It is very noticeable how magazines always contain programs for the ZX, Dragon, BBC and Commodore machines, but never Tandy.

As an alternative we have considered selling our Tandy and buying something else. My son has suggested a Spectrum, as it will give him all the facilities of an extended Colour Computer, plus extensive back-up when it comes to software, books and so forth. However, as I understand that the Spectrum does not have a conventional keyboard but uses Basic and Sinclair Basic, I wonder whether or not this would be a disadvantage later. I am writing to you as I know very little about computers.

**A** This is an important letter as it reflects what I think will be a growing difficulty in the computer world. Namely, people buying in good faith a computer that for whatever reason is not well supported. I dealt with a similar situation as regards the TI 99/4a last year.

What knocked the ground from underneath the TRS-80 Colour Computer was the Dragon. Dragon Data produced a similar machine that had more facilities, at a cheaper price. In fact, TRS-80 Colour Computer owners are not as badly off as some others, because some Dragon programs may be *Run* exactly as printed on them.

The main difficulties arise when it comes to cassette operation, but an answer has now been found. Since receiving your letter, we have run a story on the Compuserve Cartridge that will enable you to Load on to the Colour Computer any Dragon program on cassette (*Popular Computing Weekly*, March 24-30).

The Dragon is by far the most important newcomer to the home computer market, and I think by the end of this year it will be up at the top along with Sinclair, Acorn and Commodore. There would be no sense in buying another computer if you had access to all the software that is, and will become, available for the Dragon this year. A glance through the small ads in *Popular Computing Weekly* in the same week we announced the Compuserve Cartridge will reveal four Dragon/TRS-80 advertisements, including a tape version of the Compuserve Cartridge. There is also a TRS-80 users club which can be contacted at 40a High Street, Stony Stratford, Milton Keynes.

Your confusion over Basic is understandable. It must be kept in mind that Basic is a common core of commands. With the rapid advance of chip design this core has been enhanced, each company advancing as it sees fit, leading to several dialects of Basic. The TRS-80 uses a form of Microsoft Basic which is probably the most common in the world, though Sinclair Basic is probably the most common in this country. It is just that it is easy to refer to an individual dialect by calling it 'Sinclair Basic', 'Microsoft Basic' and so forth.

I have had a couple of similar queries since Christmas, from TI 99/4a owners, so I shall repeat the address of the users club. TIHome, Paul Dieks, 157 Bishopsford Road, Morden, Surrey.

## CURRENT POWER?

Donald McLean of Old Evanston Road, Rosshire, Scotland, writes:

**Q** Why is my printer working with a power source that is insufficient? According to the manual the power source should be 9V/1.2 amps. The one currently (excuse the pun) in use is only 9V/0.5 amps. I am using the power supply supplied with the computer, but between that and the computer is a set of rechargeable batteries that give the lower power.

**A** Your printer is not working on a power source that is insufficient. It is drawing its power from the mains, not the recharger. The fact that the recharger is 'in the way' does not, I'm afraid, make that much difference. The current from the mains does not magically stop at the recharger, because the line from the recharger to the computer gives it somewhere else to go.

You can test this by setting up the equipment as you describe, and then turning off at the mains: the system should then crash. The batteries might support a 1K ZX81 without any attachments, but not with a printer. Again try it, but, in both cases try only once out of interest. It will not do your system any good to try and draw more current from the power supply than is available.

## LIGHT PEN

A R Adamson of Slab Lane, West Wellow, Romsey, Hants, writes:

**Q** Could you please give me more details of the light pen mentioned in the exhibition reviews in 'Street Life' in the issue of 1 January 1983.

The article mentioned Microdeal, perhaps you could give me their address. Would the light pen read bar-coded programs, and are there any avail-

able? Does the light pen require special software for it to be used?

**A** The light pen comes with three software programs. ■ simple demonstration program that occupies 2K, ■ quiz that occupies 4K, and a music composer that occupies 10K. By the time you read this there should also be a backgammon that uses the whole 32K.

You will not be able to read bar-codes because, like most of the light pens on the market, it only has a receiver, and no emitter. It needs something which produces light, like a television.

However, ■ bar-code does not emit light, and as the pen does not shine any light on to it nothing is reflected back that it can read. This should not be any real problem, as I know of no bar-code programs for any of the British home micros, and I would not expect there to be much demand for them in the future.

Microdeal have recently moved, and are now at: 41 Truro Road, St Austell, Cornwall PL25 5JE.

## IMPROVED GRAPHICS

David Walker of Driftwood, Southsea, Hants, writes:

**Q** I am thinking of getting an Acorn Electron, and I wondered whether I could use the BBC Buggy on it. Also whether or not the Hi-Res graphics could be improved.

**A** Any answer to this won't be definite until later in May, as the Electron is not expected to make its first appearance just yet.

What you need is an 8-bit port, the lack of this is the reason the buggy will not work on the BBC A. Acorn are still keeping details of the Electron close to their chest, but I would doubt that it would have the necessary port on it.

As for your second point I am not sure what you mean. But I wouldn't expect the Electron to have the various display modes of the BBC.

**Is there anything about your computer you don't understand, and which everyone else seems to take for granted? Whatever your problem PEEK it to Ian Beardsmore and every week he will POKE back as many answers as he can. The address is PEEK & POKE, PCW, Hobhouse Court, 19 Whitcomb Street, London WC2 7HF.**

**DRAGON OWNER** wishes to swap Cost Attack cartridge for Berserk cartridge or any other programs Tel: Uppminster 25819

**WANTED**, VIC20 16K, expansion, Ram, cartridge. Tel: Peterborough 208135

**WANTED**: BBC Model B, up to £275. Tel: 0632 384658, Sandra

**ORIC** 1 computer urgently wanted. Tel: Harpenden 69152 with details, evenings

**WANTED**: Spectrum 48K, all leads, tapes and manuals, will pay £90. In N London area Tel: 01-445 1327, Sundays or between 8 pm and 10 pm

**WANTED**: Goli Vic20 cartridge Tel: Johnstone, Renfrewshire 21589

**OTHELLO** for Vic20, will swap for Cosmic Battle Tel: Banbury 720640, ask for Adrian

**WANTED**: ZX80 Tel: New Mills 43574, Ian Lockhart

**FOR VIC20 16K** serial printer. Tel: Wattham Cross 23991, after 4 pm

**SPEAK EASY** by Quick silver, desperately wanted buy or swap Tel: 0276 663201, Tuesday or Thursday evening

**WANTED**: Dragon owner to swap ideas + information, also for sale, Berserk, Rom, £10 ono. Contact Greg. Tel: Pelsall (0922) 682643, after 5 pm

**INTELLIVISION** owners willing to swap or sell cartridges. Tel: 0249 651349

**SPECTRUM** Maria Piraneta cassette. Will buy or swap with other software. Tel: 858 0253, after 5 pm

**WANTED**: 48K Spectrum, must be in A1 condition, around £140 Tel: Maidstone 881664

**16K RAM PACK** for Vic20, offer £30. Tel: Worthing 202074

**WANTED**: 48K Spectrum, with software etc, good condition Tel: Pontefract 0977 707863

**HITACHI** stereo music centre or Praktika SLR camera MTL3 (both mint) + cash, if necessary, for best BBC/Spectrum WHY Tel: 01-839 3808

## DO YOUR MONSTERS SCARE YOU?

IF NOT, ADD A NEW DIMENSION TO YOUR ZX81 WITH CAMBRODE COMPUTING'S HIGH RESOLUTION GRAPHICS BOARD

### FEATURES:

- Plugs in - no soldering
- Works on 1K
- Provides extra 256 characters
- Full software control
- Easy to update graphics in existing software

### TAPE PROVIDES PROGRAMS TO:

- Set up graphics
- Load and save graphics to tape
- Plot full screen graphics

ALSO INCLUDES 1K SPACE INVADERS AND MORE!

ALL THIS FOR ONLY £17.50 (complete kit, tape and instructions) - 75p p&p £20.50 (ready-built, tape and instructions) - 75p p&p

Send POs Cheques made payable to  
**Cambridge Computing, 1 Benson Street, Cambridge CB4 3QJ**

# NEW RELEASES

## SPACE ATTACK

John Edwards, *Astro Blaster* author

*Astro Blaster* seems to be in the classic space game tradition. This game from Quicksilva features aliens, meteor storms, plasma bolts and rapid fire laser.

The game boasts five attack waves and 15 levels of difficulty. It also features a demo version and a joystick option.

**Program** *Astro Blaster*  
**Price** £4.95  
**Micro** Spectrum 16/48K  
**Supplier** Quicksilva  
Palmerston Park House  
13 Palmerston Road  
Southampton SO1 1LL

## BAD LOSER

*Renaissance* is one of the first games for the Commodore 64. It is a version of the popular game *Othello* where you can

play against the computer.

Other features include the opportunity to take back moves you regret and to seek help from the computer. Although you are warned that this advice will be somewhat circumspect, since the computer doesn't like to lose.

**Program** *Renaissance*  
**Price** £8.95  
**Micro** Commodore 64  
**Supplier** Audiogenic Ltd  
PO Box 88, Reading  
Berks

## RUBBISH TIP

Following a success like *Arca-dia* must be a nerve-wracking experience. *Schizoids*, by Imagine is just that.

You are a sort of intergalactic garbage man, whose job it is to push debris into a black hole. Although equipped with a powerful space dozer this is not so easy, since if you get too close you will also be dragged in.

Extra lives can be won by clearing particular bits of debris.

**Program** *Schizoids*  
**Price** £5.95  
**Micro** Spectrum 16/48K  
**Supplier** Imagine Software  
Masons Building  
Exchange St East  
Liverpool L2 3PN

## DESIGNER

Wintersoft has issued a number of new cassettes for the Dragon 32. *Artist's Designer* is a utility program that allows you to create designs using the hi-res of the Dragon and allows you to then save your design on tape.

Cursor keys move the "pen" around the screen and a number of options like box and fill-in use available.

**Program** *Artist's Designer*  
**Price** £6.99  
**Micro** Dragon 32  
**Supplier** Wintersoft  
101 Westminster Bridge  
Road  
London SE1 7HR

64 is *Grand Master* from Audiogenic.

Claimed to be the strongest chess program, the game also features facilities like hint function and the chance to take back moves.

An interesting feature I have not seen before in a chess program is the chance to "cut short" the computer's thought processes, which on higher levels can take a very long time, and force it to move at once.

The game is expensively packaged with a booklet containing, amongst other things, a history of the game. It comes at a luxury price — £17.95.

**Program** *Grand Master*  
**Price** £17.95  
**Micro** Commodore 64  
**Supplier** Audiogenic Ltd  
PO Box 88  
Reading, Berks

## DRUNK IN CHARGE

*Motor Mania* is described as a "thrilling cross-country car rally" in which you use a large number of controls to try and avoid the drunken drivers who cross your path.

Other hazards include potholes, road patches and broken glass. A high score is simply a matter of how long you last.

**Program** *Motor Mania*  
**Price** £8.95  
**Micro** Commodore 64  
**Supplier** Audiogenic Ltd  
PO Box 88  
Reading, Berks

## MAGIC WAND

The Wizard from Quicksilva seems to transplant the themes of adventure into an arcade-style game.

As the Wizard, it is your task to fight off the evil hoards. To do this you are equipped with a wand which you can rotate left and right.

The game features high-resolution graphics and much of the BBC's sound option, to enhance the other-world scenario. Could it be the beginning of a new trend — *Dungeons and Puckmen* — *Wizard Invaders*?

**Program** *The Wizard*  
**Price** £6.95  
**Micro** BBC Model B  
**Supplier** Quicksilva

Palmerston Park House  
13 Palmerston Road  
Southampton SO1 1LL

## CHECK-MATE

The first version of chess I have seen for the Commodore

## LOSERS

THIS WEEK'S  
UNBEATABLE  
PROGRAM:

you sit  
here hoping  
you don't  
make up  
the remainder of  
the landing  
party.

## Zigurat

## Fmily of languages

Logo is not just a language — it is a philosophy of education and a family of languages which have been designed to help implement that philosophy. Logo came out of Seymour Papert's vision (with which I only partly agree) of the computer being used for teaching in schools. Papert calls this "the computer being used to program the child".

SA. In Papert's vision, "the child programs the computer and, in doing so, both acquires a sense of mastery over a piece of the most modern and powerful technology and establishes an intimate contact with some of the deepest ideas from science, from mathematics, and from the art of intellectual model building" (Introduction to *Mindstorms*).

The language has been evolved, therefore, to help the child obtain mastery over the machine. In a Logo environment, Papert claims even a pre-school child can control. He believes that, in using the computer, children are beginning to explore how they themselves think.

He then notes that thinking about thinking is an experience not shared by most adults (and this is one point with which I disagree). "The educator needs to understand which trends are taking place in the culture." By this Papert means, I think, that education — be it by use of computers or be it by chalk and talk — must try to take into account what society is like.

To take into account what society is like does not then mean: we need more computer personnel, therefore increase computer science courses. Rather it means: many children, by dint of having chosen the wrong parents, are heavily disadvantaged in the educational process.

Logo is designed to help all children, especially those lost to traditional methods of schooling. Whether it succeeds has to be seen.

Logo's designers followed a vision of an educational tool with no initial stumbling block and no limit on expansion.

They have tried to make it possible for even young children to control the computer at will, even at the first use of the system. And yet they have tried to make it a general purpose programming system of some power.

They found that these two main goals were complementary rather than conflicting, but that Basic was not a suitable language to adopt.

Logo is a procedure language. Logo programs are created by combining commands into groups called procedures. Logo procedures are perhaps more flexible than BBC Basic procedures, but they are by no means as flexible as Forth definitions. For example, to double the value of a number:

```
TO DUBL X
  PRINT X+X
END
```

Logo is an interactive language, in that any Logo command, whether built into the language or a defined procedure, can be executed by simply typing the command at the keyboard — just as one can instantly execute procedures in BBC Basic, or words in Forth. Logo also has a built-in editor.

The data types that can be used in Logo not only include numbers and characters, but also compound structures called *Lists*. The potential of such a *List* feature may not be immediately obvious, but it can be powerful. *List*-processing capabilities are so powerful that most languages used in Artificial Intelligence need a *list*-processing function.

The *List* function in Logo is indicated by square brackets:

```
MAKE "GOVT
[COMMONS LORDS]
MAKE "COMMONS
[CON LAB LIB SDP REST]
MAKE "CON
[MONETARISTS TRADS WETS]
```

When we then refer to the Govt in a Logo procedure, it also includes the Wets at the lowest level. The definition of the Commons might be altered to:

```
MAKE "COMMONS
[CON LAB ALLIANCE]
MAKE "ALLIANCE
[LIB SDP]
```

and thus it might continue. In next week's discussion, lists will appear when I illustrate some procedures. The idea of a list is in some ways the most important concept in Logo. Of course, Logo does have turtle graphics . . .

Boris Allen

## Puzzle

### Time-piece

Puzzle No 54

Jamie's latest electronic toy—a calculator/wristwatch — had got wet and gone haywire.

"It never shows the right time," he complained. I looked and was surprised to find it exactly correct, to the minute. Jamie was very surprised.

The water had upset the circuits inside and confused the time-keeping and calculator functions. The display shown by the watch was in fact the natural logarithm of the product of the hours and the minutes. For example, at 2.30 the display would read 4.09 (only the first two digits to the right of the decimal point would be displayed).

At what time did I look at Jamie's malfunctioning time-piece?

### Solution to Puzzle No 49

The program increments the value, *N*, from unity in steps of one. This represents the length of one side of the smallest room. From this *N* is evaluated (the total number of tiles used), and this is tested to determine if its square root is an integer.

```
10 LET N = 1
20 LET A = N * N + (N + 5) * (N + 6) + (N + 12) * (N + 12) + (N + 18) * (N + 18)
30 LET H = VAL STR$ (SQRT A)
40 LET H = INT H THEN GOTO 100
50 LET N = N + 1
60 GOTO 20
70 PRINT N, H, 6 * N + 12, N + 18, H
```

The smaller rooms are 13, 19, 25 and 31 feet square, and the hall is 46 feet square.

### Winner of Puzzle No 49

The winner is: Dave Jones, York Close, London, who receives £10.
